SUMMARY

Final year Data Science and AI student (GPA 8.24) who ships LLM agents, RAG systems and full stack products end to end. Semi finalist, Top 110 of 54,617 teams at ET GenAI Hackathon 2026. Two internships across Telugu LLM serving and Azure cloud, plus three years of freelance design and branding for 50+ clients that shapes how I build interfaces. Seeking AI/ML, GenAI and full stack internships, Hyderabad or remote.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS, Bash
AI and ML: LLMs and Generative AI, AI agents, RAG, LangChain, FAISS, prompt engineering, Hugging Face Transformers, PyTorch, LoRA, SFT, XGBoost, LightGBM, scikit learn, SHAP, model evaluation (AUC, KS, ECE)
Full Stack: React, Node.js, Express, FastAPI, Tailwind CSS, REST APIs, WebSocket, PWA, MongoDB, PostgreSQL, MySQL, Google OAuth 2.0
Cloud and Tools: Azure, AKS, Docker, Linux, Git, n8n, automated testing, observability

EXPERIENCE

Cloud Computing Intern, Mindenious Edutech, Remote Nov 2025 to Jan 2026

- Cut Azure storage costs about 30% with zero query availability loss by applying Hot to Cool lifecycle tiering to an IoT Hub, Blob Storage and Power BI pipeline on Linux based infrastructure, validated by post transition query tests.
- Deployed the application on an Azure Kubernetes Service (AKS) cluster and defined data flow and access architecture with IAM and RBAC governance.

AI Developer Intern, VISWAM.AI (Telugu LLM, IIIT Hyderabad and Meta), Hyderabad May 2025 to Jul 2025

- Sustained 10K+ sentences per second on a 1B parameter LLM by rearchitecting async queuing and batch scheduling, validated by before and after GPU benchmarks that removed the concurrency bottlenecks behind multi user serving failures.
- Cut model training time 30% by building modular LoRA and SFT pipelines with Hugging Face Transformers and PyTorch over a 500M token, 12 domain corpus.

PROJECTS

AutoOps AI, Multi Agent Orchestration Engine github.com/charan270469/autoops_ai | Walkthrough
Node.js, TypeScript, WebSocket, Groq Llama 3.3 70B, n8n, React

- Reached 80%+ autonomous task completion across 12 enterprise scenarios in 48 hours by building a planner and executor agent engine with structured tool calling and self healing retry and fallback chains.
- Made every run auditable with verifiable tool call traces and a live WebSocket dashboard of agent state, so failures trace to the exact call.

DailyEz, AI Powered Unified Inbox Dashboard github.com/charan270469/dailyez
React 19, TypeScript, Node.js, Express, MongoDB, Groq Llama 3.3 70B, Whisper, Google OAuth 2.0, Baileys

- Cut false positives and unneeded LLM calls by running a deterministic prefilter and exact sender matching before a precision first Llama 3.3 70B triage that returns each verdict with confidence and stored reasoning.
- Shipped dedupe safe Gmail and WhatsApp ingestion with OAuth refresh token persistence and cursor pagination on MongoDB, plus a Whisper to Groq voice agent for hands free inbox commands, backed by automated tests.

LoanLens AI, Explainable Credit Risk Platform github.com/charan270469/loanlens | Walkthrough
FastAPI, React, TypeScript, XGBoost, LightGBM, CatBoost, LangChain, FAISS, MongoDB, SHAP

- Scored AUC 0.791, KS 0.445 and ECE 0.032 on a 750 sample holdout with a calibrated XGBoost, LightGBM and CatBoost ensemble, with SHAP explanations on every prediction across PD, LGD and EAD scoring.
- Grounded lending decisions in loan documents with a LangChain RAG pipeline using structured query planning over FAISS and MongoDB with metadata filtering.

ScanGo, Smart Retail AI Ecosystem github.com/charan270469/scan-go | Walkthrough
PWA, WebSocket, JavaScript, HTML, CSS

- Placed Top 20 nationally at TechSprint 2025 to 26 and Top 80 of 1,000+ teams at NEXTGEN AI 2026 with an offline first retail PWA that uses WebSocket sync and concurrency control to keep shared data consistent across devices.

Also built: MediSense AI, a RAG based medical assistant with a vision pipeline and biomarker tracking (GitHub | Demo). FinVoice, a voice first multilingual banking assistant from Agentathon 2025 (GitHub).

EDUCATION

B.Tech, Computer Science (DS and AI), ICFAI Foundation for Higher Education, Hyderabad Aug 2023 to May 2027
GPA 8.24 of 10. Coursework: DSA, Operating Systems, Distributed Systems, Networks, Databases, Machine Learning.

ACHIEVEMENTS AND CERTIFICATIONS

- ET GenAI Hackathon 2026: Semi finalist, Top 110 of 54,617 teams (AutoOps AI). TechSprint 2025 to 26: Top 20 (ScanGo). NEXTGEN AI 2026: Top 80 of 1,000+ teams (ScanGo). Agentathon 2025: Guinness World Record event (FinVoice).
- Certifications: Claude 101 (Anthropic), Cyber Security (NPTEL IIT Madras), AI Skills Passport (EY, Microsoft), Generative AI (IBM).
